

# Creating a Template in Dreamweaver

Created by Ali Abdallah

1. File → New → General → Template Page → Html Template

Create. (Or, from the insert bar → Templates → Make Template).

2. Insert → Table → 5 rows, 3 columns, border 0, and 100% width.

3. Merge the first, second, and last rows.

4. Point to the central cell and select Top vertical alignment

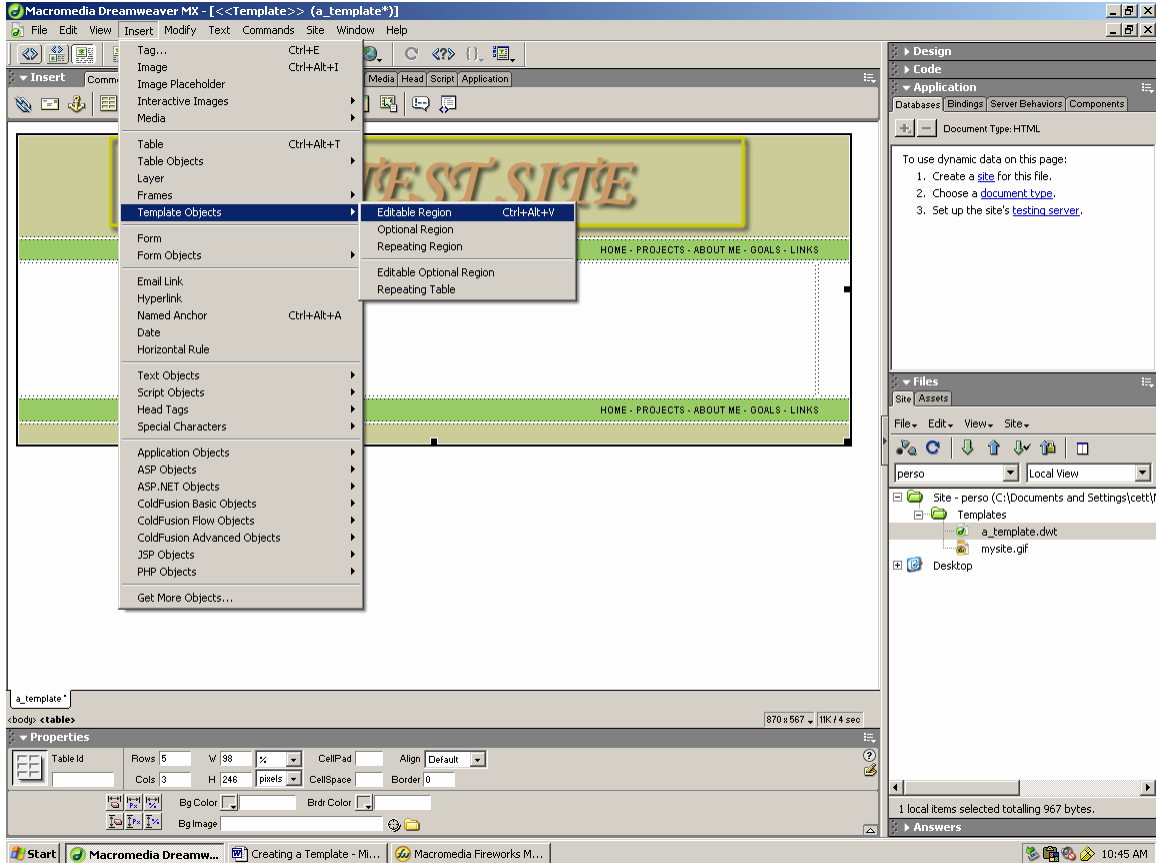

5. Insert your banner in the top row, and type the credit statement in the bottom row.

6. Create your navigation links in the second rows from top and bottom.

7. Insert → Template Object → Editable Region (Or, from the insert bar).

8. Give the editable region a name referring to your site

## 9. Save or Save as Template and give the Template a name referring to your site.

### Creating a Page from Template

1. File → New → Template → select your Site name → select your Template name.
2. Clear the Editable region and enter your material.
